

FARGO® HDP6600 Card Encoding Modules

Simplified, inline personalization of secure credentials in a single step

HID FARGO HDP6600 card encoding modules enable organizations to print and encode credentials in a one-step, inline process – saving both time and money when producing secure credentials for their employees, contractors, vendors or students. Using inline card personalization, users have greater flexibility and end-to-end control over their card procurement, inventory management and card issuance processes. Additionally, by combining printing and encoding within a single device, organizations can rest assured that their company-, employee- or student-specific data is included on each user's card, further extending the overall security of the card issuance program.

HID card encoding modules also extend the value of HID FARGO HDP6600 printers by allowing organizations to create cards that are compatible not only with HID products but also with other card/

physical access control systems and third-party applications. This technology-agnostic approach to card personalization offers organizations more flexibility in selecting access control systems and greater control over their credentials.

Select any FARGO HDP6600 card encoding module option to extend read/write capability for third-party applications such as physical access, time & attendance and cashless vending, among others. What's more, with the FARGO HDP6600 programmer card encoding module, users can create and program cards that are specifically compatible with HID physical access solutions. This can prove especially beneficial to organizations desiring to upgrade existing card populations for use with the higher security iCLASS SE platform.

Offering a wide array of inline card encoding technologies, the HID FARGO HDP6600 can meet the needs of virtually any secure credential issuance program. Further, because modules are fully field-upgradeable, FARGO HDP6600 encoding can be added or changed at any time to support new card personalization or evolving security needs as your requirements change over time.

AVAILABLE ENCODING MODULES:

- **Contactless** – Utilizing the OMNIKEY® 5127CK-Mini, contactless encoding simultaneously supports low and high frequency credentials, including iCLASS Seos®, HID Prox®, iCLASS SE® MIFARE Classic® and MIFARE® DESFire® EV1
- **Contact** – Utilizing the OMNIKEY® 5122, contact encoding integration is quick and easy, with unparalleled support and compatibility with ISO 7816 standards
- **Magnetic Stripe** – Standard magnetic stripe encoding delivers ISO 7811, dual high- and low-coercivity compatibility
- **Programmer** – Utilizing the OMNIKEY® 5127 iCLASS SE®, programmer encoding affords users the ability to encode the HID Access Control Application area of either Genuine HID® or third-party credentials with ease

HID® FARGO HDP6600 CARD ENCODING MODULES PROVIDE:

- Flexible and easy-to-integrate encoding options for read/write capability
- An optional Developer Tool Kit (DTK), which allows for integration with your credential management system
- Field-upgradeable solutions that can support new card personalization and security needs as your requirements change over time
